SUMMARY

Third-year Cybersecurity Engineering student with hands-on VAPT internship experience, SOC tooling exposure, and a strong foundation in endpoint security, incident triage, and vulnerability management. Built real-time API threat detection systems integrating alert dashboards, log correlation, and autonomous response mechanisms. Currently completing the Google Cybersecurity Certificate. Looking to contribute to a security operations team where I can apply and grow these skills in a professional environment.

TECHNICAL SKILLS

Security Tools: Burp Suite, Nmap, Metasploit, Nikto, Wireshark, Dirb, Gobuster

Languages & Dev: Python, Flask, SQLite, REST APIs, Multi-threading

SIEM & SOC: Splunk, log parsing, alert triage, incident classification

Frameworks & Standards: OWASP Top 10, MITRE ATT&CK, CVSS

Platforms: Kali Linux, Windows

PROJECT

API Shield – API Security Monitoring & Attack Detection System

March 2026

(Flask, Python, SQLite, REST APIs)

Github - github.com/aravind-sec/API-Shield

- Built a Flask-based real-time API security system with behavioral detection for credential stuffing, rate abuse, and bot activity with autonomous IP blacklisting on threat detection.
- Implemented a SOC dashboard for live alert triage and risk metrics, integrating incident severity classification and scalable SQLite logging with log rotation.
- Developed an attack simulation module for load testing and offensive validation of detection logic under real traffic conditions.
- Processed 10,000+ requests efficiently validated system stability and detection accuracy at scale.

Automated Vulnerability Assessment Tool (VULNSCAN)

Feb 2026

(Flask, Python, Nmap, Nikto, Metasploit, SSLScan, Dirb, DNSRecon)

Github - github.com/aravind-sec/port-scanner

- Built a multi-threaded vulnerability assessment platform integrating Nmap, Nikto, Metasploit, SSLScan, Dirb, and DNSRecon for comprehensive network and web surface coverage.
- Reduced scan time from 20 minutes to 3 minutes through parallel execution across scan modules a 6 times performance improvement.
- Implemented a risk scoring system (0–5) for vulnerability prioritization based on attack surface exposure and critical port analysis.

WORK EXPERIENCE

Cybersecurity Intern – Supraja Technologies

May 2025 – Jul 2025

Conducted VAPT on 3+ enterprise-simulated targets using Nmap and manual reconnaissance; identified and documented 15+ vulnerabilities across network, web, and application layers. Produced risk-prioritized reports with CVSS scores and remediation guidance aligned to OWASP Top 10.

Broken Authentication Vulnerability – Pearson

Feb 2026

Independent Security Research

- Independently discovered a broken authentication vulnerability (CWE-287, CVSS ~9.8 Critical) in a Pearson platform through self-initiated security research outside any formal engagement.
- Documented a full proof-of-concept, wrote a structured vulnerability report, and submitted findings to the vendor's security team following responsible disclosure protocol.

EDUCATION

B.E in CSE (Cyber Security)

2024 - Present

S.A. Engineering College

B.S in Data Science and its Application [Online]

2024 - Present

Indian Institute of Technology, Madras

Google Cybersecurity Certificate

In Progress
